

SCANNER WITH RETURN TYPE

Programs:

1) create a class with the following methods and then use the scanner class to get those details during run time with return type.

a) classname :employee
methods: empid
empname
empemail
empPhoneno
empSalary
empGender
empCity

b) classname :student
methods: stuid
stuname
stuclass
stumail
stuPhoneno
stuaddress
stuGender

c) classname : Transport
methods: bus
car
train
ship
flight

d) classname : Marks

methods: eng

tamil

maths

evs

hindi

Also find average and total of the marks.

Theory:

1. What is a Scanner class in Java?
2. What is difference between next () and nextLine ()?
3. Write the syntax to declare Scanner class object
