JAVASCRIPT TASKS – VARIABLES & DATATYPES – DAY 2

Topics:

1. Variables
 - var
 - let
 - const
 2. Datatypes
 - String
 - Number
 - Boolean
-

Tasks:

1. Declare a variable using var and assign your favorite color (String datatype). Print it in the console.
2. Declare a variable using var and assign your age (Number datatype). Print it in the console.
3. Declare a variable using let and assign whether you are a student (Boolean datatype). Print it in the console.
4. Declare a constant variable academyName and assign the value "Greens Technologies OMR" (String datatype). Print it in the console.
5. Declare a variable using let and assign the following employee details and print them in the console (use appropriate datatypes):

- empId (Number)
- empName (String)
- empSalary (Number)
- emplsPermanent (Boolean)
- empCity (String)

6. Declare a variable using const and assign the following product details with suitable datatypes and print them in the console:

- productName
- productPrice
- productAvailable (true/false)

7. Declare variables using var, let, and const with different datatypes (String, Number, Boolean) in a single program and print each one in the console.
